   Clear, comprehensive lecturing that taught the core concepts of the material, rather than just how to solve test problems. Wish I had had this instructor for calculus in high school.

16. Could the instruction of this course be made more effective? If so, how? (If you need more space please attach further comments.)
   Lab time could be better utilized doing example problems that build on concepts learned in class (i.e. - The worksheet where we derived the relation formula for sin(2x)). Take the time to further explore concepts as a group.

I think that the lab portion of this class was much improved upon. The extra practice time for problems with the prof were extremely helpful. Also I think that the timing of us to work together (although awkward at first) was really a good idea and beneficial, because it allowed us to better solidify our thinking through explanation towards our peers.

16. Could the instruction of this course be made more effective? If so, how? (If you need more space please attach further comments.)

I think that the prof does an amazing job, so I'm not sure how

Lots of lectures and feedback was really helpful.

16. Could the instruction of this course be made more effective? If so, how? (If you need more space please attach further comments.)

Sometimes we went through material a little too fast so it was hard to really master it before big tests/quarterly exams. Maybe if we spent a little more time on applications after learning new material, the exams wouldn't be as scary.
