

Mathematics As A Liberal Art

Final Project Individual/Group Evaluation
Due: Monday April 29

Name: _____

Please take the time to thoughtfully complete this evaluation. I will use this information in addition to all other evaluative information to give you an individual grade on the final projects.

I. **Evaluate Yourself.** What strengths did you bring to the group? What areas could you improve upon next time you have to work in a group situation?

II. **Evaluate Everyone's Participation.** In the space below, write the names of the members of your project group, including yourself. In the spaces to the right, give a percentage (0% to 100%) for each group member, including yourself, representing the total amount of work you believe each member put in for the group. All of your percentages together should total 100%. Thus in a group of four people where you believe three people worked equally and the fourth worked twice as hard, you would put 20%, 20%, 20%, 40%.

NAME

PERCENTAGE OF WORK

100 %

III. **Other Comments.** Please note any other evaluative comments (positive or critical) about your group in the space below.

IV. **Project Feedback.** Please provide feedback on the Course Project overall. Should a course project be included in future editions of this course? How could it be improved? Comment on the various aspects (written presentation, oral presentation, shared responsibility for group grade) of the course project.
