## Limits at Infinity and Horizontal Asymptotes

We have learned how to apply our ability to differentiate functions in order to find intervals on which functions are increasing and decreasing, as well as classify local maxima and minima, determine concavity and find roots of the function. This is ALMOST enough to sketch a graph by hand of most functions. The last piece we need is the ability to deal with horizontal and vertical asymptotes.
Consider the function $f(x)=\frac{4 x^{2}}{x^{2}+1}$ on the infinite interval $(-\infty,+\infty)$.
Let's sketch it below:

| $x$ | $-\infty \leftarrow$ | -1000 | -100 | -10 | -1 | 0 | 1 | 10 | 100 | 1000 | $\rightarrow+\infty$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $f(x)$ |  | 3.999996 | 3.9996 | 3.96 | 2 | 0 | 2 | 3.96 | 3.9996 | 3.999996 |  |

This table suggest that the value of $f(x)$ approaches the value of $\qquad$ as $x$ increases without bound (we say $x \rightarrow \infty$ )
The function $f(x)$ approaches the value of $\qquad$ as $x$ decreases without bound.
Mathematically, we can write these sentences as:

$$
\lim _{x \rightarrow \infty} f(x)=4 \text { and } \lim _{x \rightarrow-\infty} f(x)=4
$$

Thus the function $f(x)$ has horizontal asymptotes at $y=4$.

## Horizontal Asymptote

The line $y=L$ is a horizontal asymptote of the graph $f(x)$ if $\lim _{x \rightarrow-\infty}$ or $\lim _{x \rightarrow \infty} f(x)=L$
Considering this definition a function can have AT MOST $\qquad$ horizontal asymptotes.

## Some Rules Involving Limits at Infinity

If $\lim _{x \rightarrow \infty} f(x)=F$ and $\lim _{x \rightarrow-\infty} g(x)=G$ then

1. $\lim _{x \rightarrow \infty}[f(x)+g(x)]=F+G$
2. $\lim _{x \rightarrow \infty}[f(x) \cdot g(x)]=F \cdot G$
3. If $r$ is a positive real number and $c$ is any real number, $\lim _{x \rightarrow \infty} \frac{c}{x^{r}}=0$

## Exercise

1. $\lim _{x \rightarrow \infty} 7-\frac{1}{\sqrt{x}}=$
2. $\lim _{x \rightarrow \infty} \frac{x+300000}{x-1}=$
3. $\lim _{x \rightarrow-\infty} \frac{x+300000}{x-1}=$

## Examples

Evaluate the following limits and compare the results. Notice a pattern?
4. $\lim _{x \rightarrow \infty} \frac{3 x-5}{4 x^{2}+1}$
5. $\lim _{x \rightarrow \infty} \frac{3 x^{2}-5}{4 x^{2}+1}$
6. $\lim _{x \rightarrow \infty} \frac{3 x^{3}-5}{4 x^{2}+1}$

## Exercise

7. Consider the function $g(x)=\frac{2 x-4}{\sqrt{x^{2}+1}}$.

Q: How many horizontal asymptotes does it have?
A: Evaluate $\lim _{x \rightarrow-\infty} \frac{2 x-4}{\sqrt{x^{2}+1}}$ and $\lim _{x \rightarrow \infty} \frac{2 x-4}{\sqrt{x^{2}+1}}$

Infinite Limits Involving Trigonometric Functions
Consider the following limits
8. $\lim _{x \rightarrow-\infty} \sin (x)$
9. $\lim _{x \rightarrow-\infty} \frac{\sin (x)}{x}$

Practice, Practice, Practice
10 (a) $\lim _{x \rightarrow \infty} \frac{x}{x^{2}-1}=$

10 (b) $\lim _{x \rightarrow \infty} \frac{5 x^{2}+3}{x-1}=$

10 (c) $\lim _{x \rightarrow \infty} \frac{2 x}{x-1}+\frac{3 x}{x+1}=$

10 (d) $\lim _{x \rightarrow \infty} x \cos \left(\frac{1}{x}\right)$

10 (e) $\lim _{x \rightarrow \infty} \frac{x}{\sqrt{x^{2}-x}}$

## ANNOUNCEMENTS

Homework: $H-H$ DO page 134 \#12 for Mon Nov 16
Reading: $H$ - $H$ READ 127-136
Reminder: Exam 3 is scheduled for Monday November 23 in class
Reminder: GATEWAY Exams need to be passed by the end of the semester or else your grade is automatically reduced. Absolutely No Exceptions.
