

Quiz 3

Multivariable Calculus

Name: _____

Date: _____

Time Begun: _____

Time Ended: _____

Friday February 10

Ron Buckmire

Topic : Review of Linear Systems

The idea behind this quiz is to provide you with an opportunity to illustrate your understanding of linear systems.

Reality Check:

EXPECTED SCORE : _____/10

ACTUAL SCORE : _____/10

Instructions:

0. Please look for a hint on this quiz posted to faculty.oxy.edu/ron/math/212/06
1. Once you open the quiz, you have **30 minutes** to complete, please record your start time and end time at the top of this sheet.
2. You may use the book or any of your class notes. You must work alone.
3. If you use your own paper, please staple it to the quiz before coming to class. If you don't have a stapler, buy one.
4. After completing the quiz, sign the pledge below stating on your honor that you have adhered to these rules.
5. Your solutions must have enough details such that an impartial observer can read your work and determine HOW you came up with your solution.
6. Relax and enjoy...
7. **This quiz is due on Monday February 13**, in class. NO LATE QUIZZES WILL BE ACCEPTED.

Pledge: I, _____, pledge my honor as a human being and Occidental student, that I have followed all the rules above to the letter and in spirit.

Consider the planes $x + 2y + z = 0$ and $x - 3y - z = 0$.

1. (4 points) Find the intersection of these two planes or **EXPLAIN** why the intersection does not exist.

2. (6 points) Consider the related linear system with unknown constant parameters A , B and C

$$\begin{bmatrix} 1 & 2 & 1 \\ 1 & -3 & -1 \\ A & B & C \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}.$$

(a) (2 points) Is it possible to find values of A , B and C such that the linear system has **no solution**? **FULLY EXPLAIN YOUR ANSWER.**

(b) (2 points) Is it possible to find values of A , B and C such that the linear system has **ONE solution**? **FULLY EXPLAIN YOUR ANSWER.**

(c) (2 points) Is it possible to find values of A , B and C such that the linear system has **MORE THAN ONE solution**? **FULLY EXPLAIN YOUR ANSWER.**
