**SUMMARY** Using Laurent Series to Evaluate Residues

**CURRENT READING** Saff & Snider, §5.5

---

---

## Laurent Series

$$f(z) = \sum_{n=0}^{\infty} a_n(z - z_0)^n + \sum_{n=1}^{\infty} \frac{b_n}{(z - z_0)^n}, \quad R_1 < |z - z_0| < R_2$$

This formula for a Laurent series is also sometimes written as

$$f(z) = \sum_{n=-\infty}^{\infty} c_n(z - z_0)^n \quad \text{where } c_n = \frac{1}{2\pi i} \oint_C \frac{f(z)}{(z - z_0)^{n+1}} dz, \quad n = 0, \pm 1, \pm 2, \dots$$

In practice, one usually computes a Laurent series by comparing the function you have to one of the “famous functions” whose Maclaurin series you already know.

### GROUPWORK

1. Write down the Laurent series for  $z^2 \sin(1/z^2)$  in the domain  $0 < |z| < \infty$

2. What is the value of  $\text{Res}(z^2 \sin(1/z^2), 0)$ ?

3. Evaluate  $\oint_{|z|=1} z^2 \sin(1/z^2) dz$

4. Write down two different Laurent series for  $f(z) = \frac{1}{z(z^2 + 1)}$  and specify the domain in which your series are valid.

5. Evaluate  $\oint_{|z|=2} \frac{1}{z(z^2 + 1)} dz$  using whichever method you prefer.
